## Open ended feedback

What were the strengths of the course?
Comments
Good TA who provided good and fair feedback!

What were the weaknesses?

## Comments

Ideally the grades could have been returned quicker but any delay was never outrageously long!

What did you most enjoy about it?

## Comments

In-person, group work; wish there was more!

## Explanatory Note

## Percent Favourable Rating

This is the percentage of respondents who rated the instructor a 4 or 5 (Agree or Strongly Agree).

## Interpolated Median

The data collected for Student Evaluations of Teaching (SEoT) are ordinal in nature, with a natural order (from 1 to 5). While the mean may be used as a measure of central tendency for such data, it is not an appropriate or accurate representation of SEoT data (cf. Stark \& Freishtat, 2014). The usual measure of central tendency for ordinal data is the median. As a result, we have been reporting the mean and the median for the last several years. After considerable thought and data modeling, we now believe that the interpolated median is the best representation of the data, since it takes the frequency distribution into account.

Consider the following example from 2015W, the two classes have identical mean (3.8). However, the instructor in class 2 received $77 \%$ favourable (4-5) ratings, compared to $53 \%$ for the instructor in class 1. The Interpolated median values of (3.7 and 4.2), much better reflects the distribution of the scores above and below their respective median. Furthermore, the interpolated median is better correlated with percent favourable rating; such that an interpolated median of 3.5 on a Likert scale of 1 to 5 , corresponds to $50 \%$ favourable rating.

Frequency Distribution

| Response for UMI | Class 1 | Class 2 |
| :--- | :---: | :---: |
| 5 = Strongly agree | 5 | 5 |
| 4 = Agree | 3 | 5 |
| 3 = Neither agree nor disagree | 6 | 0 |
| 2 = Disagree | 1 | 2 |
| $1=$ Strongly disagree | 0 | 1 |
|  | 3.8 | 3.8 |
| Mean | 4.0 | 4.0 |
| Median | 3.7 | 4.2 |
| Interpolated Median | $53 \%$ | $77 \%$ |
| Percent favourable rating |  |  |

## Dispersion Index

The dispersion Index is a measure of variability suitable for ordinal data (Rampichini, Grilli \& Petrucci 2004). This dispersion index has values between zero and 1. A zero dispersion index indicates that all students in the section gave the same rating to the instructor. An index value of 1.0 is obtained when the class splits evenly between the two extreme values (Strongly Disagree \& Strongly Agree), a very rare occurrence. In SEoT data at UBC, the index rarely exceeds 0.85 , and mostly for evaluations not meeting the minimum recommended response rate.
